Assignment 6 – Part 1

Amit Shroff – aas6521

Rohan Narde – rsn5770

The Calorie Meter takes the Calories into account and gives you the Calorie Advice.

When you click the Calorie Advice button and if you're Calories are > 1000 then a Red Rectangle will be shown indicating your calories are above border.

Similarly when it is > 500 and less than 1000 it will show you a Blue Rectangle saying it is just border.

Similarly when it is < 500 then you are at safe area.

This XNA project we have learnt from the Microsoft MSDN website moving rectangle example and tried to do the same on it.
